

Two Tandem Pumps

Two tandem bellows pumps feature modular design for proportioning separate liquids. The flow rate of each bellows module is independently adjustable. Bellows modules are assembled out-of-phase for most efficient power usage. Total output of pump is limited to 3,000 ml/min.

*Amp values for 240V will be approximately 50% of 120V values shown above.

TWO TANDEM BELLOWS - TYPICAL DIMENSIONS

1" Model

Dimensions in Inches
(Dimensions in Millimeters)

Order Notes: When ordering a two tandem bellows model, add one "X" code for valve and O-ring material selection and one "T" code for connector selection from the Bellows Part Selection Guide.

Example: 13726-014 (1½" x 1½" two tandem model) with Hypalon® poppet valves and O-rings and elbow connectors for 3/8" I.D. tubing would be ordered as 13726-014 X-115 T-008 X-115 T-008.
